PROFILE SUMMARY

Software Engineering undergraduate with hands-on experience developing full stack web applications using React.js, Java, Spring Boot, PostgreSQL, FastAPI, and RESTful APIs. Strong foundation in object oriented programming, clean code practices, and Git based version control. Passionate about building scalable, user friendly software, learning new technologies quickly, and contributing effectively in collaborative development teams. Seeking a Software Engineer Intern position to help build real world products while growing as a software engineer.

Technical Skills

- Programming Languages: Java, JavaScript, Python
- Frontend: HTML5, CSS3, React.js, Tailwind CSS
- Backend : Spring Boot , FastAPI, RESTful APIs
- Databases: PostgreSQL
- Tools & Technologies: GitHub, Docker, Figma

PROJECTS

UniCompass-CLR— Personal Student Success Companion	GitHub ↗	JUL 2026
• Students often don't get quick guidance for study plans, career choices, or wellbeing support. • Built a full-stack platform with React, Spring Boot, FastAPI, PostgreSQL, and Google Gemini AI. • Added GPA tracking, an AI study advisor, a career roadmap, and a wellbeing booking system with crisis helplines. • Delivered one easy platform where students get academic, career, and wellbeing support together.		
InsightPro — Cricket Analytics & Squad Selection System	GitHub ↗	JAN 2025-JAN 2026
• Existing team selection lacked a data-driven approach to compare players based on opponent, venue, and match conditions. • Developed a full-stack application using React.js, FastAPI, PostgreSQL, and machine learning models with H2HI, PPV, and CPV performance metrics. • Delivered an AI-powered system that recommends the optimal Sri Lankan playing XI through objective player performance analysis. • Developed RESTful services and interactive dashboards. • Engineered performance metrics from large datasets and created scalable UI components.		

PredictiveHR — Employee Churn Prediction System

[GitHub ↗](#)

AUG 2025

- Organizations had difficulty identifying employees who were likely to leave the company.
- Built a React.js, FastAPI, PostgreSQL, and XGBoost-based analytics platform to predict employee attrition.
- Enabled HR teams to identify at-risk employees early and support data-driven retention strategies.
- Built REST APIs and integrated a machine learning prediction model.
- Created interactive dashboards and optimized backend performance.

Code Explainer — Programming Concept Tutor

[GitHub ↗](#)

JUL 2026

- Learners find it hard to understand coding concepts like design patterns and data structures from documentation alone.
- Built an AI code and concept explainer using React 19, Vite, Tailwind CSS, and an Express.js backend.
- Connected the backend to an LLM through a REST API to explain coding concepts in simple language.
- Created an interactive tool that helps students learn programming concepts on their own.

Full-Stack Task Manager

[GitHub ↗](#)

APR 2026

- Manual task management made it difficult to organize and track daily activities efficiently
- Developed a responsive task management system using React.js and Spring Boot.
- Designed RESTful APIs for CRUD operations, task prioritization, and status tracking.
- Integrated PostgreSQL with Spring Data JPA and Hibernate.
- Used Git and GitHub for version control.

EDUCATION

BSc (Hons) Software Engineering

JUN 2022-Present

Sri Lanka Technological Campus (SLTC)

- Major: Full Stack Development and Machine Learning | Minor: Mobile Application Development
- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Systems, Software Engineering, Web Application Development, Machine Learning, Deep Learning, Artificial Intelligence, Microservice Architecture, Project Management, SDLC

Languages

- ENGLISH
- SINHALA
